

GUYTON REINFORCING PROJECT TEAM

## Stevland Barrett

Operations Manager

Stevland (Stev) embarked on his journey in the reinforcing industry as a tie hand at a precast yard in Wellington back in 2005. Over the following five years, he honed his skills and expertise, eventually assuming leadership roles within teams engaged in site works.

With the seismic events that rocked Christchurch, Stev recognised an opportunity to contribute his talents in the South Island. For the subsequent 11 years, he served as a Foreman, overseeing the successful execution of numerous large-scale projects in Christchurch. Stev also held the position of South Island Placing Manager at a supply company, where he furthered his industry knowledge.

Stev's meticulous attention to detail and outstanding communication abilities benefit not only his team members but also his clients. He embraces the complexities of the reinforcing industry with enthusiasm and is committed to achieving excellent outcomes.
